Comprehension:

Read the given passage and answer the questions that follow.

In old persons, there is sometimes a long interval of obscure mental action before the answer to a question is evolved. (. . .) The delay here, probably, corresponded to what machinists call 'lost time', or 'back lash' in turning an old screw, the thread of which is worn. But, (. . .) I examined a young man for his degree in whom I noticed a certain regular interval, and a pretty long one, between every question and its answer. Yet the answer was, in almost every instance, correct, when at last it did come. (. . .) I do not think the mind knows what it is doing in the interval, in such cases. This latent period, during which the brain is obscurely at work, may, perhaps, belong to mathematicians more than others. Swift said of Sir Isaac Newton that, if one were to ask him a question, "he would revolve it in a circle in his brain, round and round and round" (the narrator here describing a circle on his own fore-head), "before he could produce an answer."

SubQuestion No : 11

Q.11 In describing the young man who answered questions after a regular delay, the narrator most likely attributes this pause to:

 - ☐ 2. a lack of understanding or preparation
 - ☐ 3. an intentional attempt to delay the response for dramatic effect
 - ☐ 4. an absent-minded distraction from the question

Sympathy, it is commonly said, is a kind of imitation, and this is strikingly illustrated in its early forms. A child has been observed under the age of seven months to look unhappy, drawing down well the corners of the mouth in the characteristic baby-fashion when his nurse pretended to cry. This imitative sympathy deepens with attachment. When, for example, a little girl on finding that her mother's head ached pretended to have a bad head, we appear to see the working of an impulse to get near and share in others' experiences. From this imitative acting of another's trouble, so as to share in it, there is but a step to that more direct apprehension of it which we call sympathy. (. . .) A deeper and thoughtful kind of sympathy often comes with the advent of the more reflective years. Thought about the overhanging terror, death, is sometimes its awakener. "Are you old, mother?" asked a boy of five. "Why?" she answered. "Because," he continued, "the older you are the nearer you are to dying." (. . .) This first thought for others frequently takes the practical form of helpfulness.

When, for example, a little girl on finding that her mother's head ached pretended to have a bad head, we appear to see the working of an impulse to get near and share in others' experiences. From this imitative acting of another's trouble, so as to share in it, there is but a step to that more direct apprehension of it which we call sympathy. (. . .) A deeper and thoughtful kind of sympathy often comes with the advent of the more reflective years. Thought about the overhanging terror, death, is sometimes its awakener. "Are you old, mother?" asked a boy of five. "Why?" she answered. "Because," he continued, "the older you are the nearer you are to dying." (. . .) This first thought for others frequently takes the practical form of helpfulness.

आज के शिक्षाक्रम में चरित्र गठन का कोई स्थान नहीं है और न उसे कोई महत्त्व दिया जाता है। हमारी संस्कृति में गुरु और शिष्य का संबंध बहुत ही सुन्दर और मधुर हुआ करता था। इसका कारण यही था कि दोनों का एक दूसरे पर विश्वास हुआ करता था। गुरु शिष्यों को पुत्रवत् मानते थे और उन पर स्नेह रखते थे। शिष्य गुरु को पितातुल्य और विश्वसनीय समझते थे। गुरु का शिष्य के जीवन पर गहरा प्रभाव पड़ा करता था और गुरु और शिष्य के बीच केवल व्यापारिक संबंध जिसमें पैसे के बदले कुछ पुस्तकें पढ़ा देने मात्र का एक सम्पर्क होता है, न रहकर आध्यात्मिक संबंध हो जाता था जो घनिष्ठ हुए बिना नहीं रह सकता था। आज आये दिन समाचार-पत्रों में पढ़ने को मिलता है कि कहीं विद्यार्थियों ने शिक्षकों के विरुद्ध हड़ताल कर दी तो कहीं शिक्षकों में भी दल-बंदियाँ हो गई और विद्यार्थी भी कुछ एक दल में शामिल हो गये तथा एक या दूसरे का समर्थन करने लगे। किसी यूनिवर्सिटी या कॉलेज का विद्यार्थी ऐसे काम करता है तो यह चिंता का विषय हो जाता है। जहाँ तक समझ में आता है, इसका मौलिक कारण चरित्र गठन पर ध्यान न देना और छात्रों पर शिक्षक वर्ग के नैतिक प्रभाव का न होना ही है। यह समस्या साधारणतया सारे देश में विद्यमान है।

Comprehension:

Read the given passage carefully and answer the questions that follow.

In the heart of Ladakh, nestled between rugged mountains and barren plains, lies the ancient monastery of Hemis. Built in the 17th Century, Hemis Monastery is not just a religious center but also a cultural treasure that reflects the spiritual and artistic legacy of the region. Every year, thousands of visitors gather here to witness the Hemis Festival—a two-day celebration honoring Padmasambhava, the revered figure credited with bringing Tibetan Buddhism to Ladakh.

What makes Hemis unique is not merely its remote location or its centuries-old architecture, but the spirit it continues to preserve. Amid the chants of monks, the vibrant swirl of ceremonial masks, and the rhythmic beats of sacred drums, one can sense a deep continuity—a living connection between past and present. The festival is both a religious observance and a communal gathering, where ancient traditions are not only performed but passed on and revitalised.

In recent years, however, rising tourism and expanding infrastructure have begun to transform the surrounding landscape. While this brings economic benefits and increased global attention, it also risks eroding the authenticity of Ladakh's delicate cultural fabric. Conservationists warn that without a thoughtful balance between development and preservation, irreplaceable heritage sites like Hemis could lose their soul.

Hemis stands as a vivid reminder that history isn't just recorded in books—it lives in places, people, and rituals. Safeguarding such spaces means protecting the stories that continue to shape and inspire generations.

Read the given passage carefully and answer the questions that follow.

In the heart of Ladakh, nestled between rugged mountains and barren plains, lies the ancient monastery of Hemis. Built in the 17th Century, Hemis Monastery is not just a religious center but also a cultural treasure that reflects the spiritual and artistic legacy of the region. Every year, thousands of visitors gather here to witness the Hemis Festival—a two-day celebration honoring Padmasambhava, the revered figure credited with bringing Tibetan Buddhism to Ladakh.

What makes Hemis unique is not merely its remote location or its centuries-old architecture, but the spirit it continues to preserve. Amid the chants of monks, the vibrant swirl of ceremonial masks, and the rhythmic beats of sacred drums, one can sense a deep continuity—a living connection between past and present. The festival is both a religious observance and a communal gathering, where ancient traditions are not only performed but passed on and revitalised.

In recent years, however, rising tourism and expanding infrastructure have begun to transform the surrounding landscape. While this brings economic benefits and increased global attention, it also risks eroding the authenticity of Ladakh's delicate cultural fabric. Conservationists warn that without a thoughtful balance between development and preservation, irreplaceable heritage sites like Hemis could lose their soul.

Hemis stands as a vivid reminder that history isn't just recorded in books—it lives in places, people, and rituals. Safeguarding such spaces means protecting the stories that continue to shape and inspire generations.

Food corporations engineer unhealthy snacks to create addiction, package them in ways that mislead consumers about their nutritional value, and direct their marketing towards children.

Some researchers tasked students with reading news articles detailing the deceptive practices of food corporations in their advertising strategies. Their goal was to determine whether this information would influence the students' perceptions of junk food. Worldwide, children are consuming increasing amounts of high-sugar, high-fat, and high-salt foods, largely due to the influence of cunning advertisements.

Although junk food has been linked to various health issues such as obesity and diabetes, food companies invested approximately \$9 billion in TV advertisements promoting unhealthy snacks in 2017. Advertisements featuring animated characters can make cereal appear enjoyable, while depictions of athletes enjoying sugary beverages portray them as cool choices. Corporations understand that if children desire a product, they'll pester their parents to purchase it. This revealed that analysing advertisements prompted students to opt for healthier snack choices.

Comprehension:

Read the given passage and answer the questions that follow.

Ann Johnson became paralysed and lost the ability to speak after suffering a stroke in 2005, when she was 30 years old. Eighteen years later, she consented to being surgically fitted with an experimental, thin, brain-reading implant that connects to a computer, officially called a brain-computer interface (BCI). Researchers placed the implant on her motor cortex, the part of the brain that controls physical movement, and it tracked her brain waves as she thought the words she wanted to say.

As detailed in a study published in the journal Nature Neuroscience, researchers used advances in artificial intelligence to improve the device's ability to quickly translate that brain activity into synthetic speech—now, it's almost instantaneous.

The technology “brings the same rapid speech decoding capacity of devices like Alexa and Siri to neuroprostheses,” study co-author Gopala Anumanchipalli says. Neuroprostheses are devices that can aid or replace lost bodily functions by connecting to the nervous system.

“Using a similar type of algorithm, we found that we could decode neural data and, for the first time, enable near-synchronous voice streaming,” he adds. “The result is more naturalistic, fluent speech synthesis.”

Previously, the research team had worked with Johnson to generate speech using an automated voice and digital avatar. That system, which had a delay of about eight seconds to decode her brain patterns, would speak full sentences at once. . . . Now, the enhanced experimental device can continuously identify words from brain activity and translate them into speech within about three seconds, per Nature News.

The Games were regulated by the Asian Games Federation (AGF) from the first Games in New Delhi, India, until the 1982 Games. Since the 1982 they have been organised by the Olympic Council of Asia (OCA), after the break up of the Asian Games Federation. The Games are recognised by the International Olympic Committee (IOC) and are described as the second largest multi-sport event after the Olympic Games.

Asian Games, the comprehensive sports competition in Asia, is the biggest sports games in Asia, which is held by the members of the Asian Sports Federation by turns. Just like the worldwide sports games as Olympics and World Cup, it is held every four years. Far East Games, the predecessor of the Asian Games, was initiated in 1911 by Philippine Sports Association and since then it was held every two years by turns in Manila (Philippines), Shanghai (China) and Osaka (Japan). It was totally held for 10 times until 1937 when the world war broke out. In 1948, people from Asian sports circles who had taken part in Olympics gathered and suggested to resume the Far East Games in a way that it should be held every four years in a larger scale with a new name 'Asian Games'.

Comprehension:

Read the given passage and answer the questions that follow.

Chocolate, a universally cherished delicacy, manifests in various delightful forms like bars, candies and desserts. Its history spans millennia, dating back to the ancient Mayans and Aztecs, who revered the cacao tree as a divine gift. Introduced to Europe in the 16th century, chocolate quickly captivated royal palates.

However, there's a looming threat to chocolate's future. While complete disappearance is improbable, concerns arise regarding its accessibility and quality due to several factors, primarily climate change. Cacao trees, pivotal for chocolate production, are sensitive to shifting environmental conditions, potentially rendering current cultivation regions unsuitable in the coming decades.

A study in Environmental Science and Technology forecasts a drastic reduction of cacao-growing areas in West Africa, the world's primary cocoa producer, by up to 50% by 2050, jeopardising millions of livelihoods. Pests and diseases further exacerbate these challenges.

To address these issues, scientists and farmers are collaborating on breeding resilient cacao varieties and adopting sustainable farming practices. Notably, researchers from the University of California and Mars Incorporated are endeavouring to cultivate more hard cacao seeds capable of thriving in changing climates.

While the future of chocolate faces hurdles, concerted efforts aim to safeguard its existence. Awareness of climate change's impact and support for sustainable practices are crucial in ensuring chocolate's availability for future generations.

- Ans**
- ☒ 1. Climate change
 - ☐ 2. Cultivation regions
 - ☐ 3. Cocoa plant
 - ☐ 4. Sustainable development

Comprehension:

Read the given passage and answer the questions that follow.

Chocolate, a universally cherished delicacy, manifests in various delightful forms like bars, candies and desserts. Its history spans millennia, dating back to the ancient Mayans and Aztecs, who revered the cacao tree as a divine gift. Introduced to Europe in the 16th century, chocolate quickly captivated royal palates.

However, there's a looming threat to chocolate's future. While complete disappearance is improbable, concerns arise regarding its accessibility and quality due to several factors, primarily climate change. Cacao trees, pivotal for chocolate production, are sensitive to shifting environmental conditions, potentially rendering current cultivation regions unsuitable in the coming decades.

A study in Environmental Science and Technology forecasts a drastic reduction of cacao-growing areas in West Africa, the world's primary cocoa producer, by up to 50% by 2050, jeopardising millions of livelihoods. Pests and diseases further exacerbate these challenges.

Yuri Gagarin, at 27, made history as the first human to journey into space, orbiting the Earth on 12 April 1961, in Vostok 1, launched from Baikonur Cosmodrome. His flight lasted 108 minutes, breaking the bounds of Earth's gravity. Born to a carpenter father and a mother who worked as a milkmaid, Gagarin's early life was marked by displacement during World War II. Excelling in mathematics and physics, he pursued his passion for flying, becoming a fighter pilot after graduating from pilot school.

Selected among 20 candidates for the Soviet Union's inaugural manned space mission, Gagarin embarked on his historic flight as a passenger, lacking control over Vostok 1. Technical malfunctions caused high temperatures within the capsule, forcing Gagarin to eject shortly before landing, descending safely with a parachute.

Upon his return, Gagarin achieved global fame, touring countries like Germany, Canada and Japan to showcase Soviet technological prowess. Tragically, his life was cut short at 34 in 1968, when his plane crashed during a training flight, depriving him of witnessing the ongoing advancements in space exploration.

Comprehension:

दिए गए गद्यांश के आधार पर पूछे गए प्रश्न का उत्तर दीजिए।

ज्ञान मनुष्य के निजी, सामाजिक और राजनीतिक जीवन को परिचालित करता है इसलिए हर सत्ता इसे अपने उपकरण में बदलती रही है। इसकी समय-समय पर धार्मिक-बौद्धिक किलेबंदी हुई है। इधर देखा जा रहा है कि ज्ञान स्वयं में शक्ति नहीं है, शक्ति ही ज्ञान है। सत्ता का कथन ही ज्ञान हो तो ज्ञान के बड़े-बड़े केन्द्रों के बावजूद वह वस्तुतः विस्थापित होता है। 21वीं सदी की एक अन्य घटना यह है कि ज्ञान को सूचना, हुनर या चतुराई का पर्याय मानकर ज्ञान की धारणा बदली जा रही है। इसे अधिक से अधिक उपयोगितावादी बनाया जा रहा है शिक्षा में इसके मानवीय आयाम पृष्ठभूमि में जा रहे हैं। इन स्थितियों में ज्ञान और सूचना में फर्क करना जरूरी है, साथ ही ज्ञान और ज्ञान के आडंबर के बीच भी फर्क करना चाहिए। व्यवसायिक विज्ञापन की संतानें सूचनाको ही ज्ञान कहती हैं या राजनीतिक प्रचार को ही ज्ञान माना जाता है।

Comprehension:

Read the given passage and answer the questions that follow.

Trees are remarkable organisms that quietly sustain life on Earth. They produce oxygen, store carbon, and provide habitat for countless species. Beneath the soil, trees communicate and share resources through an intricate network of roots and fungi, often referred to as the 'wood wide web'. This network allows trees to send nutrients to one another and even warn their neighbours of potential threats, such as insect attacks or diseases. Scientists have discovered that older, larger trees play a crucial role in this network. Known as 'mother trees', they nurture young saplings by sending them water and nutrients. These findings highlight the interdependence within forests and the importance of preserving these ecosystems for future generations.

Global climate change is not a future problem. Changes to Earth's climate driven by increased human emissions of heat-trapping greenhouse gases are already having widespread effects on the environment: glaciers and ice sheets are shrinking, river and lake ice is breaking up earlier, plant and animal geographic ranges are shifting, and plants and trees are blooming sooner. Effects that scientists had long predicted would result from global climate change are now occurring, such as sea ice loss, accelerated sea level rise, and longer, more intense heat waves. Some changes (such as droughts, wildfires, and extreme rainfall) are happening faster than scientists previously assessed. In fact, according to the Intergovernmental Panel on Climate Change (IPCC) — the United Nations body established to assess the science related to climate change — modern humans have never before seen the observed changes in our global climate, and some of these changes are irreversible over the next hundreds to thousands of years. Scientists have high confidence that global temperatures will continue to rise for many decades, mainly due to greenhouse gases produced by human activities. The IPCC's Sixth Assessment report, published in 2021, found that human emissions of heat-trapping gases have already warmed the climate by nearly 2 degrees Fahrenheit (1.1 degrees Celsius) since 1850-1900. The global average temperature is expected to reach or exceed 1.5 degrees C (about 3 degrees F) within the next few decades. These changes will affect all regions of Earth.

Comprehension:

Read the given passage carefully and answer the questions that follow.

The Amazon Rainforest, often referred to as the 'lungs of the Earth', plays a vital role in maintaining global ecological balance. Covering approximately 5.5 million square kilometres, it spans nine countries, with Brazil housing the largest portion. This biodiverse region hosts millions of species, many of which are yet to be discovered. It absorbs vast amounts of carbon dioxide, helping to mitigate climate change, while producing 20% of the planet's oxygen.

Despite its ecological significance, the Amazon faces severe threats. Deforestation for agriculture, illegal logging, and infrastructure development are leading causes of habitat destruction. Over the last few decades, millions of hectares have been cleared, disrupting ecosystems and accelerating climate change. The loss of the Amazon could result in catastrophic consequences for biodiversity and global weather patterns. International organisations and governments are increasingly prioritising conservation efforts. Sustainable farming practices, reforestation projects, and stricter regulations on deforestation are some measures being implemented. However, local communities must also be involved, as they are both affected by and essential to the forest's preservation. The Amazon's future depends on collaborative global efforts. Protecting it is not merely a regional concern but a global imperative for the well-being of the planet.

हिमालय क्षेत्र सदियों से औषधीय जड़ी-बूटियों का भंडार रहा है । यहां उगने वाली वनस्पतियाँ स्वास्थ्य संवर्धन और गंभीर रोगों के उपचार में सहायक होती हैं । अश्वगंधा, शिलाजीत, कुटकी, गिलोय, तेजपत्र और जटामाँसी जैसी जड़ी-बूटियाँ हिमालय के विशिष्ट पर्यावरण में विकसित होती हैं, जिससे इनमें औषधीय गुणों की अधिकता रहती है । वैज्ञानिक शोध इन औषधियों की प्रभावशीलता को प्रमाणित कर रहे हैं । उदाहरणस्वरूप, गिलोय प्रतिरक्षा प्रणाली को मजबूत करने में सहायक है, जबकि शिलाजीत ऊर्जा और सहनशक्ति बढ़ाने में उपयोगी है । जटामाँसी तनाव और अनिद्रा के उपचार में कारगर सिद्ध होती है । तेजपत्र पाचन तंत्र को दुरुस्त करता है और हृदय रोगों में लाभकारी होता है । हिमालयी वनस्पतियाँ पोषण की दृष्टि से भी महत्वपूर्ण हैं और आयुर्वेदिक औषधियों व स्वास्थ्यवर्धक पेय में प्रयुक्त होती हैं । हालांकि, वनों की अंधाधुंध कटाई और अवैज्ञानिक दोहन से यह पारिस्थितिकी तंत्र खतरे में है । यदि इन औषधीय पौधों का संरक्षण नहीं किया गया, तो आने वाली पीढ़ियाँ इनके लाभों से वंचित रह सकती हैं । सरकार, वैज्ञानिकों और स्थानीय समुदायों को इन दुर्लभ जड़ी-बूटियों के संरक्षण हेतु ठोस प्रयास करने होंगे । वैज्ञानिक दृष्टिकोण और जागरूकता से ही हिमालयी जैव-विविधता को संरक्षित किया जा सकता है ।

Comprehension:

Read the given passage carefully and answer the questions that follow.

Some of the biggest and most expensive transportation projects in the world have involved building bridges. Bridges are crucial links that carry cars, trucks, and trains across bodies of water, mountain gorges, or other roads. As a result, they are one of the most important aspects of civil engineering and are subject to intense scrutiny, especially when they collapse.

Bridge collapses can be tragic events, leading to loss of life and serious property damage. That's why bridge engineers, designers, and builders must always take their jobs very seriously. The best way for them to prevent these accidents is to understand why bridges collapse in the first place. Understanding bridge collapses can lead to major changes in the design, construction, and safety of future building projects. The following are main reasons why bridges fall.

Historically, wooden bridges were highly susceptible to fire, especially train bridges, where sparks from the wheels could ignite the structure. Modern bridge failures can occur during construction due to engineering errors, leading to catastrophic collapses. Earthquakes, while rare, can also cause significant damage, especially to older structures. Defects in materials or design can lead to unexpected bridge failures. Additionally, accidents involving boats or trains, particularly those with high impact or mass, can compromise bridge integrity. To mitigate these risks, modern engineering practices emphasise preventative measures, including advanced structural analysis, safer construction environments, and robust designs.

SubQuestion No : 11

Q.11 What is the primary focus of bridge engineers to prevent collapses?

- Ans**
- ☒ 1. Understanding the causes of previous bridge failures
 - ☐ 2. Limiting traffic flow on bridges to reduce load
 - ☐ 3. Monitoring construction sites for unauthorised personnel
 - ☐ 4. Conducting regular fire drills on wooden bridges

In May 1891, the London Vegetarian Society held a meeting in Portsmouth. Present were not just English, but also two Indian members, TT Majumdar and Mohandas Karamchand Gandhi, both students of law in London. For Gandhi, later one of the leading figures in the Indian Independence movement, membership in the London Vegetarian Society was a formative experience. It allowed him to discover vegetarianism as an ethically motivated choice and integrate it into a philosophy of non-violence. The encounter was not a singular instance. It was part of a larger entanglement between European vegetarianism and India. In order to buttress what was then a fringe lifestyle, vegetarians in Europe made frequent reference to meat abstention in other parts of the world. Particularly the figure of the 'merciful Hindoo', as John Oswald, author of one of the first tracts on vegetarianism, put it in 1791, loomed large in the vegetarian imagination. In India, by contrast, interest in European vegetarianism only developed in the last decades of the nineteenth century. In Hinduism, many animals were revered as divine, most of all cows, whose meat was anathema to any pious Hindu, while the use of their products, including their excreta, was enjoined for human use and purification.

Power foods are foods that provide rich levels of nutrients like fibre, potassium and minerals. With people becoming increasingly health conscious today, a lot of fitness trainers encourage their clients to include these foods in their daily diets to increase muscle development. There are various ways of incorporating power foods into your daily diet. Of course, the key to enjoying power foods is proper preparation of these foods, the use of seasonally fresh foods, and identifying your flavour of preference among power foods. Some of the recommended power food combinations are those that are prepared in our kitchens regularly. Take, for instance, the combination of chickpeas and onions. This combination is a powerful source of iron which is required by the body to transport oxygen to its various parts. Iron deficiency can lead to anaemia, fatigue, brain fog and tiredness. A study in the Journal of Agricultural and Food Chemistry says that sulphur compounds in onions and garlic help in the absorption of iron and zinc from chickpeas. The combination is a hit with teenagers who need to be diligent about getting iron in their diet. A quick way to prepare this power food is to make a chickpea salad with chopped onions, chaat masala and cilantro. Among beverages, green tea is the best source of catechins that are effective in halting oxidative damage to cells. According to researchers at Purdue University, adding a dash of lemon juice to green tea makes the catechins even more easily absorbable by the body.

There are various ways of incorporating power foods into your daily diet. Of course, the key to enjoying power foods is proper preparation of these foods, the use of seasonally fresh foods, and identifying your flavour of preference among power foods. Some of the recommended power food combinations are those that are prepared in our kitchens regularly. Take, for instance, the combination of chickpeas and onions. This combination is a powerful source of iron which is required by the body to transport oxygen to its various parts. Iron deficiency can lead to anaemia, fatigue, brain fog and tiredness. A study in the Journal of Agricultural and Food Chemistry says that sulphur compounds in onions and garlic help in the absorption of iron and zinc from chickpeas. The combination is a hit with teenagers who need to be diligent about getting iron in their diet. A quick way to prepare this power food is to make a chickpea salad with chopped onions, chaat masala and cilantro. Among beverages, green tea is the best source of catechins that are effective in halting oxidative damage to cells. According to researchers at Purdue University, adding a dash of lemon juice to green tea makes the catechins even more easily absorbable by the body.

Comprehension:

Read the given passage and answer the questions that follow.

Happiness is like the sun: it is often hidden by the clouds of thoughts, worries and desires. We have to scatter and dissolve them to experience happiness. You don't have to create happiness. All you have to do is calm your mind because when there is a quiet mind and inner peace, there is happiness. Happiness is not something far away and unattainable. Happiness does not depend on circumstances, objects or events. It is an inseparable part of our consciousness, of our essence but hidden and covered from sight by our thoughts, desires and worries. The mind is always in a constant race from one thought to another, from one worry to another. It constantly moves from one object or task to another, never standing still. This restlessness hides the happiness that is within you. It is like a choppy sea that hides the bottom. When the sea gets calm you can see the bottom. In the same way, when the mind gets quiet, you sense the happiness that is within you. You can experience more and more happiness in your life. Only your thoughts stand in your way of experiencing it. Next time you feel happy, stop for a moment and watch the state of your mind. You will be surprised to discover that it is calm, and there are almost no thoughts in your mind. Since the mind is not accustomed to staying in this peaceful state for long, it soon becomes active again, and the sense of happiness disappears.

Read the given passage and answer the questions that follow.

Happiness is like the sun: it is often hidden by the clouds of thoughts, worries and desires. We have to scatter and dissolve them to experience happiness. You don't have to create happiness. All you have to do is calm your mind because when there is a quiet mind and inner peace, there is happiness. Happiness is not something far away and unattainable. Happiness does not depend on circumstances, objects or events. It is an inseparable part of our consciousness, of our essence but hidden and covered from sight by our thoughts, desires and worries. The mind is always in a constant race from one thought to another, from one worry to another. It constantly moves from one object or task to another, never standing still. This restlessness hides the happiness that is within you. It is like a choppy sea that hides the bottom. When the sea gets calm you can see the bottom. In the same way, when the mind gets quiet, you sense the happiness that is within you. You can experience more and more happiness in your life. Only your thoughts stand in your way of experiencing it. Next time you feel happy, stop for a moment and watch the state of your mind. You will be surprised to discover that it is calm, and there are almost no thoughts in your mind. Since the mind is not accustomed to staying in this peaceful state for long, it soon becomes active again, and the sense of happiness disappears.

Comprehension:

Right from the early Vedic period, people have been celebrating the birth of a son, but in those days, daughters born into a family were not neglected but were educated properly. This changed during the later Vedic age, when daughters were considered a social burden. Only girls belonging to upper-class families enjoyed education and got proper nourishment. From thereon, the condition of women in society only worsened. However, during the nineteenth century, many social reformers such as Raja Ram Mohan Roy, Sir Syed Ahmed Khan, Annie Besant, Jyotiba Phule, and others advocated for women's emancipation in India. Since then, there has been tremendous progress in every field, but unfortunately, girls are still neglected in many families. Their education is not considered important, and most of the parents feel that it is a waste of money. Due to this, the literacy rate of our nation is impacted. To be a developed nation, India needs to concentrate on female education. If women are educated, all the problems like female foeticide, dowry, child marriages, and other related atrocities would vanish from our country. Education will bring equality to our country, and India will be an uplifted country then.

Comprehension:

दिए गए गद्यांश के आधार पर निम्नलिखित प्रश्नों के उत्तर दीजिए-

श्री मैथलीशरण गुप्त के जन्मशताब्दी वर्ष में यह स्वाभाविक ही है कि उनके अवदान का मूल्यांकन और स्मरण किया जाये। उनकी कविता पर ध्यान इसलिए भी जाता है कि इसमें हमारी राष्ट्रीय चेतना का एक स्वरूप बड़े स्पष्ट रूप से व्यक्त हुआ है। निश्चय ही, यह विचारणीय है कि गुप्तजी द्वारा अभ्यांतरीकृत और अभिव्यक्त राष्ट्रीय चेतना की विशेषताएँ क्या हैं? यह प्रश्न केवल ऐतिहासिक ही नहीं, समकालिक भी है। हमारे देश के आधुनिक राष्ट्र राज्य बनने की ऐतिहासिक प्रक्रिया का एक चरण राष्ट्रीय स्वाधीनता प्राप्ति के साथ पूरा हुआ। स्वाधीनता आन्दोलन के दौरान हमारे समाज ने कुछ मूल्य अर्जित किये, कुछ अवधारणाएँ विकसित कीं, स्वप्न देखे, लेकिन आज इस विरासत की लगभग हर धारणा के सामने अभूतपूर्व तीखे सवाल हैं। यह भयानक राष्ट्रीय व्यथा का दौर है। राष्ट्रीय एकता के सामने अभूतपूर्व और अनापेक्षित दरारों की चुनौतियाँ हैं। समतावादी समाज के निर्णय का संकल्प करते-करते शासक वर्ग ने वस्तुतः उपभोगवादी समाज का निर्माण कर दिया है। भौतिक साधन सम्पन्नता में वृद्धि के बावजूद कंगाली कम होने की जगह विकराल रूप से बढ़ी है। धर्म निरपेक्ष राष्ट्रीय एकता की बात करते-करते हम ऐसी जगह आ पहुँचे हैं जहाँ कट्टर साम्प्रदायिकता की स्वीकृति ही नहीं, उसका औचित्य निरूपण भी धड़ल्ले से किया जा रहा है। हिंसा को तेजी से सामाजिक स्वीकृति मिल रही है।

Comprehension:

Read the given passage and answer the question that follows.

The lockdown announced last March to combat the pandemic led to substantial collateral damage. Among the worst hit was the aviation industry which was forced to shut down. Therefore, when flying resumed two months later with restrictions, the government stepped in to help by fixing different price bands depending on the duration of flights. In other words, the minimum and maximum fares were fixed. It was an imperfect arrangement but the context justified government intervention in the most fundamental aspect of a market economy. In a market transaction, the price is the most essential feature. It is the signal which affects the present and also future allocation of resources. Yet, almost nine months after domestic aviation resumed, the government has decided to continue with price bands. The extension of price bands is an unwise move. We are at a stage when the pandemic-related controls by the government have to end. The price bands are seen to be helping out companies with weak financials, but they bring no efficiency gains and are at the cost of the consumer. The experience in many countries, including India, shows that minimum support prices are addictive. Consequently, there is always lobbying to persist with them. But fast-paced return to normalcy needs to be done at the earliest.

Comprehension:

Read the given passage and answer the question that follows.

The lockdown announced last March to combat the pandemic led to substantial collateral damage. Among the worst hit was the aviation industry which was forced to shut down. Therefore, when flying resumed two months later with restrictions, the government stepped in to help by fixing different price bands depending on the duration of flights. In other words, the minimum and maximum fares were fixed. It was an imperfect arrangement but the context justified government intervention in the most fundamental aspect of a market economy. In a market transaction, the price is the most essential feature. It is the signal which affects the present and also future allocation of resources. Yet, almost nine months after domestic aviation resumed, the government has decided to continue with price bands. The extension of price bands is an unwise move. We are at a stage when the pandemic-related controls by the government have to end. The price bands are seen to be helping out companies with weak financials, but they bring no efficiency gains and are at the cost of the consumer. The experience in many countries, including India, shows that minimum support prices are addictive. Consequently, there is always lobbying to persist with them. But fast-paced return to normalcy needs to be done at the earliest.

I was a below-average student and rarely my teachers knew me by name. Since failures were more of a habit than an exception, a below-par performance never disturbed me. Both my teachers as well as my parents NEVER felt proud of me. Of course, my parents being noble-hearted never gave up on me. To shield me, they always projected a positive image of me to the world. While pursuing my graduation in Mathematics, I failed one of the subjects in my fourth semester. For the first time, hearing about my failure, I saw tears in my father's eyes. I couldn't handle his crying. My thoughts were haunting me, "Rajan, you don't have any taste of success." With tears flooding, I cried. My neighbour, Vijayaraghavan, who learned about the sobbing of my soul, casually said, "Rajan, the harder you press the spring the faster it will bounce back. So what if your life has been pressed down by failures for 18 years? Decide to bounce back and bounce back big in life. Even God will not stop you." I bounced back! I bounced back big to clear my graduation with first class and have since made my parents proud.

In the 1920s, Gertrude Ederle from New York, USA, wanted to prove that a woman could complete a swimming challenge said to be as difficult and dangerous as climbing Mount Everest. She wanted to be the first woman to swim across the freezing waters of the English Channel, a feat that had been completed earlier by only three men. In August 1926, aged nineteen, Gertrude waded into the sea of France and set off on her second attempt to swim the English Channel. Rather than wearing a heavy woollen swimsuit, she made herself one of the first two-piece bathing suits as the male athletes who had completed this feat before swam naked to remain light-weighted. Her whole body was smothered in grease to keep her warm in the cold water. She wore a bright red swimming cap so that onlookers could spot her in the waves, and she wore goggles to stop sea water from stinging her eyes. She used her strongest stroke, which was the American crawl, even though everyone said breaststroke was better. Finally, after swimming for 14 hours and 31 minutes and around 35 miles, she reached the English coast and set a new record time that was two hours faster than any of the men who had previously completed the swim.

World peacekeeping is one of the very fundamental human responsibilities. All countries and continents around the world should refrain from any kind of warfare with neighbouring or any other country. All nations worldwide should keep very good and friendly relationships with each other. People should not encourage any cross-border political tensions to avoid war. The recent ongoing Russia-Ukraine war is a solid example of such political tension between the cross-border nations. Two neighbouring countries which were formerly one are now engaged in a war. This, mostly because of political reasons, still exists between the two nations even after the former USSR was divided into various smaller nations. Russia initiated the war, and Ukraine resisted. This war is due to the interest of one man's aim. As a result of which, many innocent lives are in danger or even ended. Today, the entire world is also divided into two halves, each group of nations supporting Ukraine and the other group Russia. In this way, an unofficial global war has already been started. This is causing heavy economic losses to people worldwide, directly or indirectly. The cost of petroleum and cooking gas has alarmingly become high. CITES was conceived in the spirit of such cooperation. Today, it accords varying degrees of protection to more than 37,000 species of animals and plants, whether they are traded as live specimens, fur coats or dried herbs. CITES was drafted as a result of a resolution adopted in 1963 at a meeting of members of IUCN (The World Conservation Union). Sometimes fate is like a small sandstorm that keeps changing directions. You change direction but the sandstorm chases you. You turn again, but the storm adjusts. Over and over you play this out, like some ominous dance with death just before dawn. Why? Because this storm isn't something that blew in from far away, something that has nothing to do with you. This storm is you. Something inside of you. So all you can do is give in to it, step right inside the storm, closing your eyes and plugging up your ears so the sand doesn't get in, and walk through it, step by step. There's no sun there, no moon, no direction, no sense of time; just fine white sand swirling up into the sky like pulverised bones. That's the kind of sandstorm you need to imagine. And you really will have to make it through that violent, metaphysical, symbolic storm. No matter how metaphysical or symbolic it might be, make no mistake about it: it will cut through flesh like a thousand razor blades. People will bleed there, and you will bleed too. Hot, red blood. You'll catch that blood in your hands, your own blood and the blood of others. And once the storm is over, you won't remember how you made it through, how you managed to survive. You won't even be sure, in fact, whether the storm is really over. But one thing is certain. When you come out of the storm, you won't be the same person who walked in. That's what this storm's all about.

SubQuestion No : 16

Homoeopathy has come to be known, over the years, as a form of medical treatment without side effects. In the 18th century, Dr. Samuel Hahnemann, convinced that existing medical practices did more harm than good, began to look for an alternative that would be safe, gentle and effective. He reasoned that instead of suppressing symptoms as allopathy does, one should seek to stimulate and so encourage and assist the body's natural healing process. Hahnemann had already discovered that a small dose of quinine in a healthy person produced the symptoms of malaria. A number of systematic experiments followed this discovery. Hahnemann then worked to establish the smallest effective dose as he realised that this was the best way to avoid side effects. In doing so, he unexpectedly discovered one of the basic tenets of homeopathy, that the more a remedy was diluted, the more effective it became. Thus, by trial and perseverance, Hahnemann finally arrived at his goal. One of the principles of homeopathy is that a person's response to a disease varies according to his or her basic temperament. Thus, a homeopathy doctor will take into account the patient's temperament and responses to certain conditions before prescribing any medicine.

Elon Musk's company, Neuralink, hopes to revolutionise brain-computer interfaces (BCIs) and has implanted a 'brain-reading' device into a person for the first time. BCIs record and decode brain activity with the aim of allowing a person with severe paralysis to control a computer, robotic arm, wheelchair, or other device through thought alone. Neuralink targets the activity of individual neurons—an approach that requires electrodes that penetrate the brain. The Neuralink chip contains 64 flexible polymer threads, providing 1,024 sites for recording brain activity, according to the company's study brochure. That is considerably more than Blackrock Neurotech's BCIs, the only other single-neuron recording system to have been implanted long-term in humans. Neuralink's study brochure says that volunteers will be followed for five years. regarding the device's functionality, with volunteers using it at least twice weekly to control a computer and feedback on the experience. Comprehension:

Read the given passage and answer the questions that follow.

Bees play a crucial role in maintaining biodiversity and sustaining ecosystems. Their primary function is pollination, a process vital for the reproduction of flowering plants. As bees collect nectar from flowers, pollen grains stick to their bodies and are transferred from one flower to another, facilitating the fertilisation of plants. This, in turn, leads to the production of fruits and seeds.

Without bees, many plants would struggle to reproduce, affecting the entire food chain. In addition to providing essential pollination services, bees contribute to the economy through honey production. Beekeeping is a longstanding practice, and honey is not only a sweetener but also boasts of various health benefits.

Despite their significance, bee populations are facing threats such as habitat loss, pesticide exposure and climate change. Efforts to raise awareness about the importance of bees and promote conservation measures are essential. Individuals can contribute by planting bee-friendly plants and avoiding the use of harmful pesticides.

In the natural world, mimicry is more than mere imitation — it's a sophisticated survival strategy honed by evolution. Mimicry refers to the phenomenon where one organism evolves to resemble another, often to gain an advantage such as avoiding predators, luring prey, or blending into its environment. A classic example is the Viceroy butterfly, which closely resembles the toxic Monarch butterfly. Predators that have learned to avoid the Monarch due to its unpleasant taste also steer clear of the harmless Viceroy. There are different types of mimicry, including Batesian, where a harmless species mimics a harmful one, and Müllerian, where two harmful species evolve to resemble one another, reinforcing avoidance behaviour in predators. Some species even use aggressive mimicry to deceive prey. For example, the anglerfish uses a bioluminescent lure to attract smaller fish within striking range. Mimicry isn't limited to appearance; it can extend to behaviour and sound. Certain nonvenomous snakes mimic the rattle of rattlesnakes, and some birds imitate the calls of other species to distract or deceive. These adaptations are not accidental — they are products of selective pressure, enabling the mimics to survive, reproduce, and pass on their deceptive traits. As scientific tools improve, researchers continue to uncover the genetic and neurological bases of mimicry. These discoveries deepen our understanding of how deception, when rooted in biology, becomes one of evolution's most fascinating tactics.

In the vast realm of quantum mechanics, the concept of entanglement has intrigued physicists for decades. Entanglement occurs when two or more particles become correlated in such a way that the state of one particle instantly influences the state of the other, regardless of the distance between them. This phenomenon challenges our classical understanding of physics, as it suggests a form of interconnectedness that defies traditional notions of space and time.

Recent experiments have delved into the intricacies of entanglement, revealing its potential applications in quantum computing and communication. Scientists have harnessed the delicate dance of entangled particles to create qubits, the fundamental units of quantum information. Quantum entanglement not only promises revolutionary advancements in technology but also raises profound questions about the nature of reality itself.

Comprehension:

Read the given passage and answer the questions that follow.

In recent years, urban gardening has emerged as a powerful movement in cities around the world. As space becomes increasingly limited in densely populated areas, citizens have begun transforming rooftops, balconies and even abandoned lots into thriving green spaces. This trend not only brings aesthetic value to the urban landscape but also addresses critical issues such as food security and mental well-being.

Many urban dwellers grow their own herbs, vegetables and fruits, reducing their dependence on commercial supply chains. This not only ensures fresher produce but also promotes sustainable living. In addition, participating in gardening activities has been linked to reduced stress levels, improved mood and increased physical activity. Community gardens, in particular, have become hubs for social interaction, fostering a sense of unity and shared responsibility among neighbours.

However, the movement is not without its challenges. Limited access to sunlight, water supply and suitable soil can hinder progress. Moreover, not everyone has the knowledge or resources to maintain a successful garden. Despite these obstacles, the benefits of urban gardening have encouraged many local governments and organisations to offer support through workshops, subsidies and awareness campaigns.

As cities continue to grow and climate concerns rise, urban gardening offers a hopeful and practical solution for greener, healthier and more connected communities.

Patients and therapists may sing, play instruments, dance, compose or simply listen to music.

Located on Athens' Acropolis, the Parthenon is a temple dedicated to the Greek goddess Athena that dates back to the fifth century BC. It functioned as the Delian League's treasury for a while before becoming the Athenian Empire. The Parthenon is a Doric peripteral temple, which means that it consists of a rectangular floor plan with a series of low steps on every side and a colonnade (8 × 17) of Doric columns extending around the periphery of the entire structure. Each entrance has an additional six columns in front of it. The larger of the two interior rooms, the naos, housed the cult statue. The smaller room (the opisthodomos) was used as a treasury. The Colosseum of Rome, the largest and most famous of the Roman amphitheatres, was opened for use in AD 80. It consisted of three storeys and an upper gallery. It could seat between 40,000 and 50,000 spectators. It was principally used for gladiator fights.

गदाश के आधार पर अग्रलिखित प्रश्नों के उत्तर दीजिए।

हम जिस दृश्य को देखते हैं उससे हमारी दृष्टि बनती है। जब हम अस्पताल में जाकर दुनिया को देखते हैं तो, और जब हम किसी बाग में जाकर दुनिया को देखते हैं तो, हमारी दृष्टि एक नहीं होती। लेकिन हमारी दृष्टि से भी दृश्य बनता है। हम मरीज के रूप में अस्पताल जाते हैं या डाक्टर के रूप में अस्पताल जाते हैं या अटेंडेंट के रूप में अस्पताल जाते हैं, इससे भी अस्पताल का दृश्य बनता और बिगड़ता है। इसलिए दृश्य और दृष्टि, दोनों एक-दूसरे को निर्मित करते हैं। यान्त्रिक रूप से दृश्य से ही हमारी चेतना नहीं बनती है, हमारी दृष्टि से भी हमारा दृश्य बनता है। जो समाज में, आर्थिक जीवन में, उत्पादन सम्बन्धों में हमारी स्थिति होती है, उस स्थिति से हमारी दृष्टि बनती है। उस दृष्टि से हमारी चेतना बनती है। इसलिए उत्पादन प्रक्रिया में या उत्पादन सम्बन्धों के भीतर अपनी स्थिति से पैदा होने वाली चेतना को हम वर्ग-चेतना कहते हैं, और उस उत्पादन प्रक्रिया में सीधे-सीधे दो वर्ग जुड़ते हैं, लेकिन उन दो वर्गों के साथ और बहुत तरह के काम होते हैं जिसके कारण सीधे दो वर्गों के अलावा भी बहुत सारे वर्ग रहते हैं। सामन्ती समाज में बहुत से कलाकार होते थे। केवल शिल्पी और व्यापारी, केवल किसान और ज़मींदार नहीं होते थे। इनके अलावा भी बहुत से वर्ग होते थे और आधुनिक समाज में भी जिसे हम मध्यवर्ग कहते हैं, जो एक हजार तरीके के कामों में लगा हुआ है।
