Comprehension:

Read the given passage carefully and answer the questions that follow.

Scarlett O'Hara famously asked her husband, Rhett Butler, "Where shall I go?" to which he famously replied, "Frankly, my dear, I don't give a damn." One of the finest movie quotations ever is found toward the end of director Victor Fleming's 1939 American historical romantic epic film, *Gone with the Wind*, it's also one of all-time favourite lines from a movie. But in 1930s American society, the term 'damn' was a swear word. Due to the word's offensive nature and consequent prohibition by the 1930 Motion Picture Production Code, sometimes known as the 'Hays Code', American film censors insisted on its removal two months prior to the movie's release. A few weeks before the movie's release, the Motion Picture Association of America board amended the Production Code, which caused the censors to change their minds.

A word that had originally been offensive became suddenly unoffensive, most likely as a result of the changed sensitivities of American culture that made it possible to update the Motion Picture Production Code. Since then, American perceptions of these issues have advanced significantly.

What is offensive to society will continue to be offensive unless its sensibilities significantly shift. People's senses, belief systems, conventions, and practises don't change suddenly. They develop slowly. Therefore, it is meaningless to inquire as to why something should be offensive to some while not being so to others, or why people aren't saner and more tolerant when it comes to sensitive and disputed social topics.

Cinema has a significant impact on its consumers since it is a captivating audio-visual medium of entertainment that teaches information, knowledge, beliefs, values, etc. A film's effects on people and society can be either beneficial or bad depending on its subject matter and method of presentation. While a movie may be suitable for certain people's age and sensibilities, it may not be suitable for other people's age and sensibilities. Not everyone is intended to watch every movie. A controversial movie might also spark societal turmoil or even violence. As a result, every nation requires a formal agency to oversee its cinema ethics and policy. In India, the Central Board of Film Certification (CBFC), sometimes known as the 'Censor Board', must certify a movie as appropriate for the purpose before it can be released for public screening.

Under the Cinematograph Act of 1952, the CBFC, which operates as a statutory agency under the Ministry of Information and Broadcasting, controls how movies are shown. Its responsibility is to make sure that the nation's citizens enjoy wholesome enjoyment through cinematic media. The CBFC is required to certify that a movie, in whole or in part, does not jeopardise India's sovereignty and integrity, jeopardise its security and relations with foreign states, cause public disorder or crime, cause defamation or court contempt, violate social norms and values, offend any group of people or community, etc.

Read the given passage carefully and answer the questions that follow.

Scarlett O'Hara famously asked her husband, Rhett Butler, "Where shall I go?" to which he famously replied, "Frankly, my dear, I don't give a damn." One of the finest movie quotations ever is found toward the end of director Victor Fleming's 1939 American historical romantic epic film, *Gone with the Wind*, it's also one of all-time favourite lines from a movie. But in 1930s American society, the term 'damn' was a swear word. Due to the word's offensive nature and consequent prohibition by the 1930 Motion Picture Production Code, sometimes known as the 'Hays Code', American film censors insisted on its removal two months prior to the movie's release. A few weeks before the movie's release, the Motion Picture Association of America board amended the Production Code, which caused the censors to change their minds.

A word that had originally been offensive became suddenly unoffensive, most likely as a result of the changed sensitivities of American culture that made it possible to update the Motion Picture Production Code. Since then, American perceptions of these issues have advanced significantly.

What is offensive to society will continue to be offensive unless its sensibilities significantly shift. People's senses, belief systems, conventions, and practises don't change suddenly. They develop slowly. Therefore, it is meaningless to inquire as to why something should be offensive to some while not being so to others, or why people aren't saner and more tolerant when it comes to sensitive and disputed social topics.

Cinema has a significant impact on its consumers since it is a captivating audio-visual medium of entertainment that teaches information, knowledge, beliefs, values, etc. A film's effects on people and society can be either beneficial or bad depending on its subject matter and method of presentation. While a movie may be suitable for certain people's age and sensibilities, it may not be suitable for other people's age and sensibilities. Not everyone is intended to watch every movie. A controversial movie might also spark societal turmoil or even violence. As a result, every nation requires a formal agency to oversee its cinema ethics and policy. In India, the Central Board of Film Certification (CBFC), sometimes known as the 'Censor Board', must certify a movie as appropriate for the purpose before it can be released for public screening.

Under the Cinematograph Act of 1952, the CBFC, which operates as a statutory agency under the Ministry of Information and Broadcasting, controls how movies are shown. Its responsibility is to make sure that the nation's citizens enjoy wholesome enjoyment through cinematic media. The CBFC is required to certify that a movie, in whole or in part, does not jeopardise India's sovereignty and integrity, jeopardise its security and relations with foreign states, cause public disorder or crime, cause defamation or court contempt, violate social norms and values, offend any group of people or community, etc.

The topic of renewable energy is becoming increasingly important as concerns about climate change and the depletion of non-renewable resources continue to grow. Renewable energy sources, such as solar and wind power, have the potential to provide a clean and sustainable source of power for the world's growing population.

One of the major advantages of renewable energy is that it is not limited by the same supply constraints as fossil fuels. Unlike oil, coal, and natural gas, which are finite resources that will eventually run out, renewable energy sources like solar and wind power will never run out. Additionally, renewable energy sources do not produce the greenhouse gases that are responsible for climate change, making them a much more environmentally friendly option.

Despite the clear benefits of renewable energy, there are still significant challenges that need to be overcome in order for it to become a viable alternative to fossil fuels. One of the main challenges is the cost of renewable energy, which is currently higher than traditional fossil fuels. However, as technology continues to improve and economies of scale are achieved, the cost of renewable energy is expected to decrease.

Another challenge is the need for reliable and efficient energy storage solutions, which are essential for the widespread adoption of renewable energy. Without effective energy storage solutions, renewable energy sources like solar and wind power can only be used when the sun is shining or the wind is blowing, which greatly limits their overall usefulness.

Overall, renewable energy has the potential to play a critical role in addressing the world's energy needs and reducing dependence on fossil fuels. While challenges remain, with continued research and development, renewable energy is likely to become increasingly viable and important in the coming years.

- Ans**
- ☐ 1. The Future of Nuclear Energy
 - ☐ 2. The Role of Technology in Energy Production
 - ☒ 3. The Advantages and Challenges of Renewable Energy
 - ☐ 4. The Environmental Impact of Non-Renewable Energy Sources

Comprehension:

Read the given passage carefully and answer the questions that follow.

The process of photosynthesis is one of the most important biological processes on Earth. It is the way that plants, algae, and some types of bacteria convert energy from the sun into chemical energy in the form of organic compounds. These organic compounds, such as sugars, are then used by the organism as a source of energy and as building blocks for growth and reproduction.

The basic process of photosynthesis can be broken down into two main stages: the light-dependent reactions and the light-independent reactions (also known as the Calvin cycle). In the light-dependent reactions, energy from sunlight is absorbed by pigments in the chloroplasts of plant cells, and is used to convert water into oxygen and high-energy electrons. These electrons are then used to power the synthesis of ATP and NADPH, which are energy-rich molecules that are used in the light-independent reactions.

In the light-independent reactions, the energy from ATP and NADPH is used to fix carbon dioxide into organic compounds, such as glucose. This process is known as carbon fixation and is mediated by a series of enzymes called the Calvin cycle. These reactions take place in the stroma of the chloroplasts, and the end result is the production of glucose and other sugars.

Photosynthesis is not only important for the survival of plants, but also for all other organisms that depend on plants as a source of food. In addition, the oxygen produced during photosynthesis is crucial for the survival of animals and other organisms that require oxygen for respiration. Without the process of photosynthesis, the Earth's atmosphere would not contain the high levels of oxygen that are necessary for most forms of life to survive.

Overall, photosynthesis is a vital process that plays a critical role in the Earth's ecosystem, providing the energy and organic compounds needed for the growth and survival of all forms of life.

The basic process of photosynthesis can be broken down into two main stages: the light-dependent reactions and the light-independent reactions (also known as the Calvin cycle). In the light-dependent reactions, energy from sunlight is absorbed by pigments in the chloroplasts of plant cells, and is used to convert water into oxygen and high-energy electrons. These electrons are then used to power the synthesis of ATP and NADPH, which are energy-rich molecules that are used in the light-independent reactions.

In the light-independent reactions, the energy from ATP and NADPH is used to fix carbon dioxide into organic compounds, such as glucose. This process is known as carbon fixation and is mediated by a series of enzymes called the Calvin cycle. These reactions take place in the stroma of the chloroplasts, and the end result is the production of glucose and other sugars.

Photosynthesis is not only important for the survival of plants, but also for all other organisms that depend on plants as a source of food. In addition, the oxygen produced during photosynthesis is crucial for the survival of animals and other organisms that require oxygen for respiration. Without the process of photosynthesis, the Earth's atmosphere would not contain the high levels of oxygen that are necessary for most forms of life to survive.

Overall, photosynthesis is a vital process that plays a critical role in the Earth's ecosystem, providing the energy and organic compounds needed for the growth and survival of all forms of life.

 - ☒ 4. Informal and personal

Comprehension:

Read the given passage carefully and answer the questions that follow.

The process of photosynthesis is one of the most important biological processes on Earth. It is the way that plants, algae, and some types of bacteria convert energy from the sun into chemical energy in the form of organic compounds. These organic compounds, such as sugars, are then used by the organism as a source of energy and as building blocks for growth and reproduction. Comprehension:

Read the given passage carefully and answer the questions that follow.

Everything that departs from righteousness could be considered corrupt, taken in a broad sense. However, we all possess traits like fear, egotism, greed, sloth, and wrath. We tend to travel in the wrong direction when the proportion of negative qualities is noticeably higher than the positive ones like honesty, purity, and serenity. The core cause of corruption is the innate tendency to be affected by external factors. Since the beginning of time, it has existed. However, sincerity and integrity are crucial in many aspects of life, including interpersonal relationships, the workplace, commerce, government, and the legal system. The abuse of authority for personal gain is corruption. We believe that the cost of food, access to clean drinking water, economic possibilities, and housing amenities are fundamental needs for every citizen. However, the government spends a lot of money on infrastructure initiatives like constructing flyovers, modernising airports, and fostering economic growth.

Have you ever wondered why this is the case? Why can't we address social ills like poverty and illiteracy? It's because we've grown accustomed to living with corruption as the standard. The integrity of our own and other people's behaviour bothers us the least. Therefore, there is a loss of integrity on a monetary, intellectual, and moral level. Even after years of independence, we still worry about societal bias, safety, and economic slowdowns. In today's world, bribery is used to obtain government contracts, licences, and patents, avoid paying taxes, and other things. Low and mid-level authorities frequently abuse their authority to provide necessary products and services. We typically take into account bribes in addition to the agreed-upon price. However, high-level corruption in both the public and corporate sectors leads to the manipulation of laws and regulations, which may have a negative impact on the general public. The prevalence of widespread corruption in the system puts a country's economy in jeopardy. Negative factors impeding our growth include the massive mountain of non-performing assets, a lack of foreign investment, and schedule and cost overruns on infrastructure projects. Additionally, our administrative processes are drenched in red tape and require bribes at every turn. To begin any business activity, a lot of paperwork is required, and hundreds of rules must be followed. It makes us unwelcoming and makes it challenging for foreigners to invest here. Project delays and cancellations are also brought on by red tape. The fundamental cause of social disparity is corruption. The poor are particularly hard hit. Not everyone has the financial means to pay bribes. Additionally, although there are more pipeline, dam, and refinery developments in our area, not everyone has access to basic necessities like roads, schools, and hospitals. The stability of the nation may suffer from a divided community. Criminals are produced as a result, and they pose a threat to the rule of law. The entire population needs to be made aware of the problem, and those who wish to fight corruption should come together. We should determine the overall amount of money lost as a result of unethical behaviour and inform everyone of it. It is imperative that we monitor the money raised by political parties. Politicians' earnings and wealth should be made available to the public. The Jan Lokpal bill revolutionised the war against corruption. However, just like earlier measures, it was modified to suit unscrupulous individuals. The general population has grown so accustomed to the wrongdoings that we now put up with unfair treatment and corrupt behaviour. Businesses and long-term thinkers dislike conflict with bureaucracy.

Not everyone has the financial means to pay bribes. Additionally, although there are more pipeline, dam, and refinery developments in our area, not everyone has access to basic necessities like roads, schools, and hospitals. The stability of the nation may suffer from a divided community. Criminals are produced as a result, and they pose a threat to the rule of law. The entire population needs to be made aware of the problem, and those who wish to fight corruption should come together. We should determine the overall amount of money lost as a result of unethical behaviour and inform everyone of it. It is imperative that we monitor the money raised by political parties. Politicians' earnings and wealth should be made available to the public. The Jan Lokpal bill revolutionised the war against corruption. However, just like earlier measures, it was modified to suit unscrupulous individuals. The general population has grown so accustomed to the wrongdoings that we now put up with unfair treatment and corrupt behaviour. Businesses and long-term thinkers dislike conflict with bureaucracy.

"It is not a lip or eye we beauty call/ But the joint force and full result of all," wrote Alexander Pope, the English intellectual poet and contemporary of John Dryden. The very idea of beauty is subjective because we never take it in totality.

Years ago, one saw a painting at an art museum in Warsaw, Poland. Some unknown Polish painter made it during World War I. It was about an undraped woman, who had a chiselled body but no face. There was a comment in the corner of that painting: Impose your idea of beauty on it and think of a face for her.

Everyone will visualise according to his one idea of beauty. This is indeed intriguing. Beauty, especially feminine beauty, is always stereotyped and reduced to concrete and unaltered idioms. The core concept of beauty lies in being abstract. 'Koi soorat de do ke tarasta hoon main/ Meri taameer ki mitti abhi narm hai dekho' – Give me a face, an appearance; my clay's still wet. The moment we try to concretise and quantify beauty, it loses its aura and its appeal. There is a term in French – 'Je ne sais quoi', I know not what. Beauty ought to have this quality that cannot be adequately described or expressed, yet that makes somebody or something more attractive and interesting.

Beauty is always an open-ended idea. Neither can you bind it, nor can you define it. It is like love, indefinable, yet so desirable. And like love, it can only be felt and experienced. You can never appreciate it superficially. Then it becomes voyeuristic and too quotidian.

The use of plastic bags has been a contentious issue for many years. On one hand, they are convenient for carrying groceries and other items. On the other hand, they are a major contributor to pollution and can have devastating effects on the environment.

One of the main causes of plastic bag pollution is their widespread use. They are given out for free at almost every store and are used for just a few minutes before being discarded. This means that there are billions of plastic bags in circulation at any given time, many of which end up as litter on streets, in parks, and in waterways.

Another cause of plastic bag pollution is their slow degradation. Plastic bags can take up to 1,000 years to decompose, which means that they will continue to pollute the environment for centuries to come. This is especially problematic in oceans where they can harm marine life and damage ecosystems.

The effects of plastic bag pollution are wide-ranging and can be devastating. They can harm wildlife and marine life, damage ecosystems, and even contribute to the spread of disease. Plastic bags that end up in oceans can be mistaken as food by marine animals, leading to starvation or suffocation. They can also entangle animals, making it difficult for them to move or escape predators. Plastic bags can also damage coral reefs, which are vital habitats for many species of marine life.

In addition to harming wildlife, plastic bags can also affect human health. Plastic bags that end up in waterways can contaminate drinking water and food sources, leading to the spread of disease. They can also block drainage systems, causing flooding and other problems.

To address the problem of plastic bag pollution, many cities and countries have implemented plastic bag bans or fees. These policies have been effective in reducing the use of plastic bags and in turn reducing pollution. Consumers can also take action by choosing to bring reusable bags when shopping, or by using paper bags instead of plastic bags.

In conclusion, the use of plastic bags has severe consequences on the environment and human health. The cause of the problem is the widespread use and slow degradation of plastic bags, while the effects are wide-ranging and can be devastating. To mitigate these effects, individuals and governments can take actions such as implementing plastic bag bans, choosing to use reusable bags or paper bags instead of plastic bags.

Assam's Kaziranga National Park was (1)_____ by severe floods in 2016 that destroyed 80 per cent of the park's land and killed its wildlife.

World Heritage-listed Kaziranga National Park is in India. It is a (2)_____ area with the highest tiger population in the world and is home to two-thirds of the world's great one-horned rhinoceroses. In addition, there are a lot of elephants, swamp deer, and wild water buffalo in this area.

Nearly 250 animals, including at least 20 one-horned rhinos, were killed in the devastating 2016 floods. Over 200 animals were saved by the foresters, including nine rhino calves. Sadly, we have very little control over the annual flood phenomenon. Due to significant climatic changes, the possibility that it will only get worse in the coming years is (3)_____. Additionally, the dangers posed by road and highway encroachment as well as the increasing number of human settlements surrounding the Park's core areas are a cause for concern.

In order to guarantee the complete safety of the wildlife and other inhabitants of the area, it is high time that we plan some risk reduction measures. Because they are familiar with the river, its course, and other relocation centres where wildlife can be sheltered, the local communities can support us. Additionally, we must ensure that no animals are chained up during the disaster. Their likelihood of surviving floods is increased by 50% as a result.

When combined with the (4)_____ provided by the public authority, conventional information by the local people can undoubtedly prevent animals from succumbing to these devastating events.

The life cycle is extremely delicate. While preventing flooding would be beneficial for the animals, we must also recognise that these water levels supply the soil with essential nutrients. This, in turn, aids in the development of grasses. The base of the food chain is then formed by this. Animals would begin to die from a lack of essential nutrients if the floods stopped. While it is our responsibility to (5)_____ wildlife, we must never negatively affect the life cycle.

The French and Dutch settled on the island in the 1600s, and to this day, the island is divided between the two of them. The French capital is Marigot; the Dutch capital is Philipsburg. Tourists soon discover that St. Maarten has an intriguing history. Ancient artifacts found on the island date back to the Stone Age, 6,000 years ago! Tourists also learn that 1,200 years ago the Arawak Indians inhabited all the islands of the West Indies and were a peaceful people living under the guidance of their chiefs. Three hundred years after the Arawaks first arrived on St. Maarten, in the 1300s, they were defeated and forced to abandon the island by a hostile tribe of Indians originating in South America. This new tribe was called the Carib. The Caribbean Sea was named after them. Unlike the Arawaks, they had no permanent chiefs or leaders, except in times of strife. And they were extremely warlike.

Once upon a time, in a land far, far away, there lived a group of mischievous monkeys. These monkeys were known throughout the land for their love of mischief and pranks. They were always up to something, and the other animals in the forest never knew what to expect from them.

One day, the monkeys decided to play a prank on the elephants. They climbed up to the top of a tall tree and began throwing ripe bananas at the unsuspecting elephants below. The elephants, not used to being pelted with fruit, were confused and startled. They trumpeted in alarm and ran around in circles, trying to figure out what was happening.

The monkeys, meanwhile, were having the time of their lives. They laughed and chattered as they threw more and more bananas at the elephants. The elephants, however, were not amused. They decided to teach the monkeys a lesson and began to shake the tree with all their might.

The monkeys, realizing they had gone too far, quickly climbed down from the tree and ran away as fast as they could. They knew they had made a big mistake and felt guilty for causing so much trouble.

From that day on, the monkeys decided to stick to less destructive pranks, like stealing the ranger's hat or putting honey in the bird feeder. They learned their lesson and lived happily ever after, never bothering the elephants again.

The moral of the story: monkeys will be monkeys, but sometimes even they need to learn when to stop monkey-ing around.
